AH - Automation System for High-level Applications

The new generation AH Series PLC provides automation solutions for high-level applications. The combination of modularized hardware structure, advanced functions, and the highly integrated software provides a system solution for process control applications. In addition to various function blocks, excellent performance, and an abundant selection of extension modules, the AH Series PLC also provides exceptional system expandability and full redundant solution, greatly reducing the system cost for a broad range of applications.

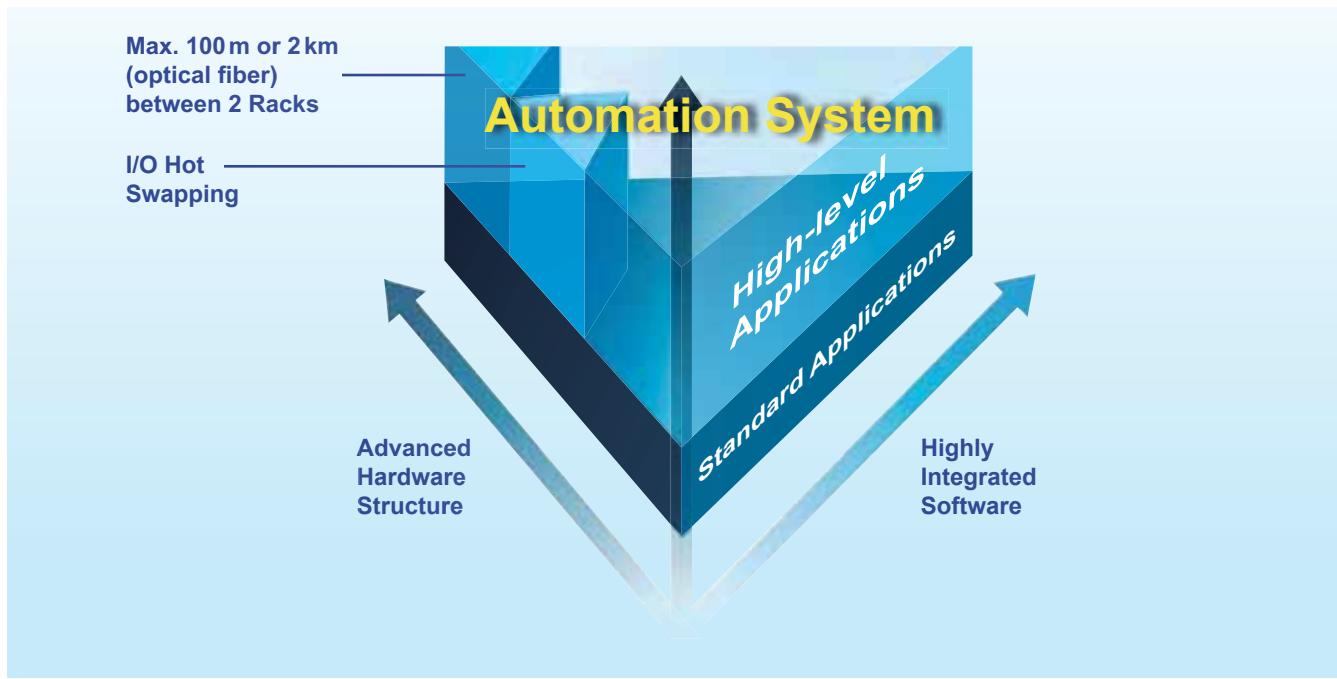

- » Highly integrated software ISPSofT: graphical interface with 5 programming languages
- » Enhanced flexibility: Max. 100m or 2km (optical fiber) between 2 local extension racks
- » Redundant and hot-swapping functions keep the system running for improved maintainability
- » Reliable operations of the supported modules in severe conditions
 - * Operating condition: -20~60°C/5~95% (Non-condensing)
 - * Storage condition: -40~70°C/5~95% (Non-condensing)
- Utilizes 32-bit processor
- Max. I/O points:
 - DIO: Max. 4,352 points
 - AIO: Max. 544 channels
 - RIO: >100,000 points
- Program capacity: Max. 1 M steps (4 MB)
Data register (D+L): 512 k words
- Excellent program execution speed: LD instruction execution speed: 0.02µs
- CPU built-in with fully isolated RS-232/422/485, Mini-USB, Ethernet and SDHC card slot
- Abundant selection of DIO modules, AIO modules, temperature measurement modules, network modules, pulse-train modules and DMCNET/EtherCAT motion control modules

AH Series PLC – Automation System with Fully Integrated Hardware and Software Interfaces

Highly Integrated Software – Excellent Accessibility

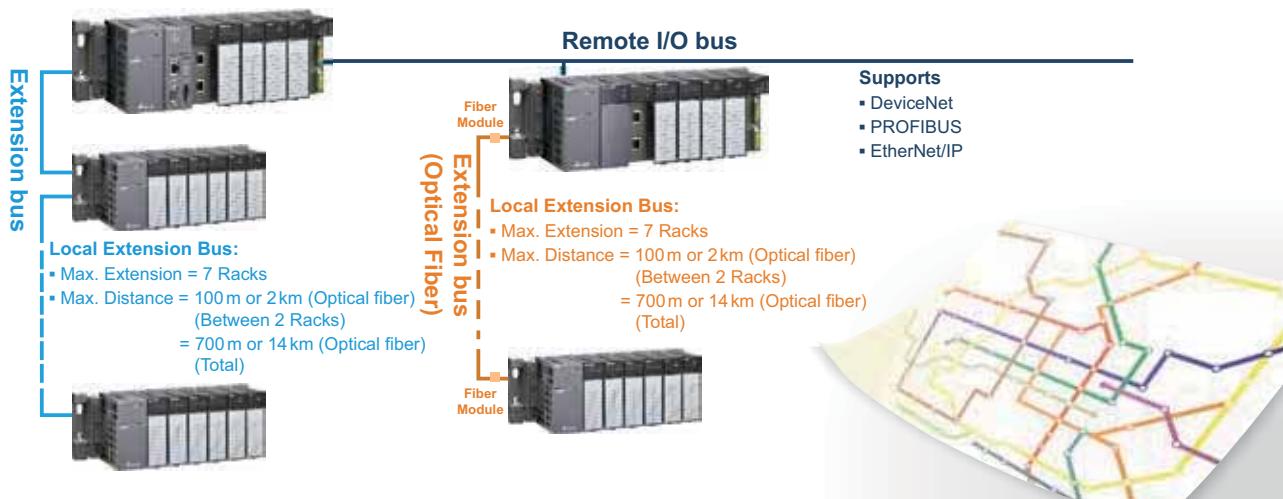

AH PLCs adopt the highly accessible programming software ISPSoft, integrating the main functions that include control process programming, hardware configuration, network configuration, and providing a graphical interface for these functions. In addition, users of ISPSoft can choose their most efficient programming tools from the 5 supported languages: Ladder Diagram (LD), Function Block Diagram (FBD), Sequential Function Chart (SFC), Instruction List (IL) and Structured Text (ST).

Enhanced Flexibility – Extends the System Freely

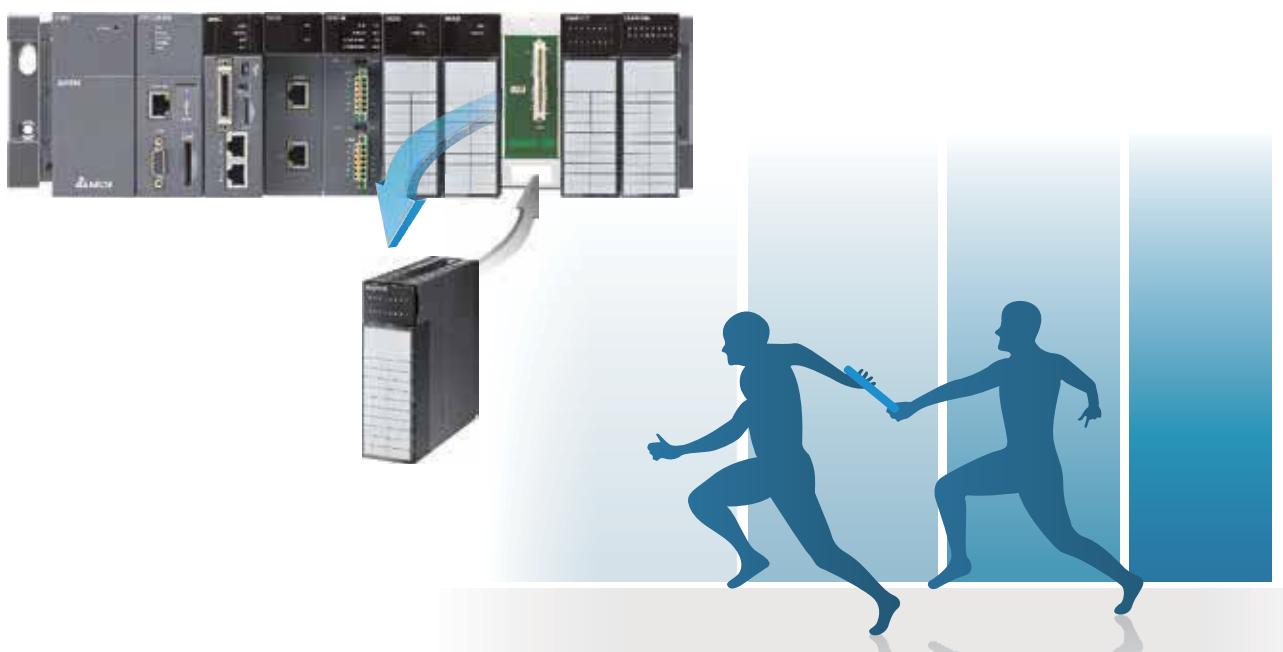

The length of extension cables between each AH local extension rack can reach a maximum of 100m or 2km (optical fiber), greatly enhancing wiring flexibility. In addition, the AH provides modularized backplanes and modules applicable for not only CPU racks but also for remote I/O racks. This feature improves the flexibility of system planning and reduces the additional cost that might be generated by preparing two different types of spare backplanes and modules.

System Extension Structure

Improved Maintainability – Keeps the System Running

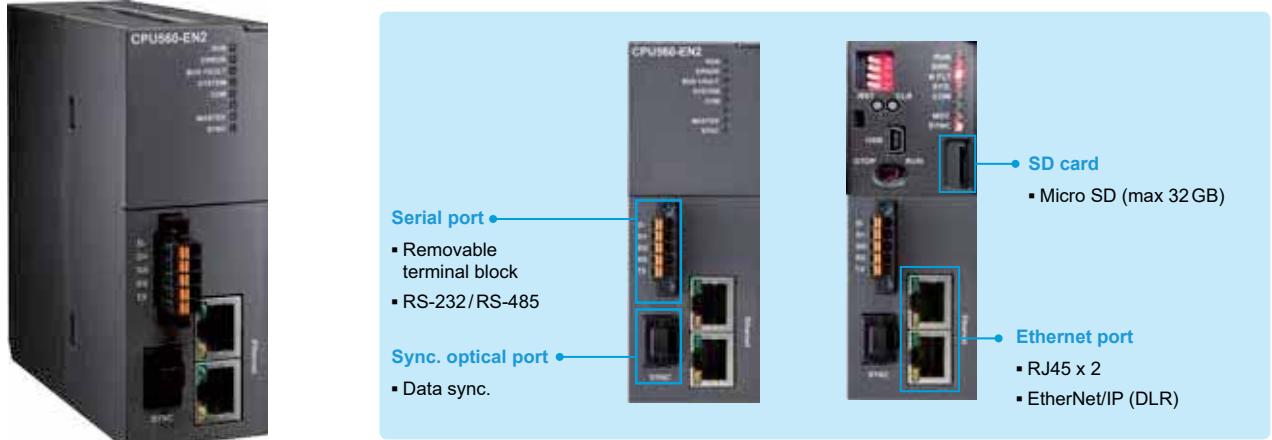

The hot-swap function provided for AIO and DIO modules increases maintainability when I/O modules fail. Users can replace modules without stopping the operation of the CPU module, preventing a possible loss due to a pause in the system's operation.

Redundant CPU

The redundant CPU of the AH Series adopts a reliable redundancy structure, and integrates synchronous modules, Ethernet ports and serial communication interfaces for a more competitive control solution.

AHCPU560-EN2

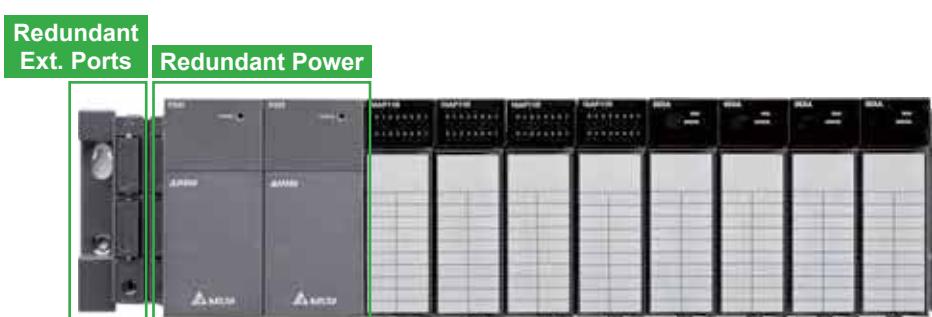

Redundant Backplane

The redundant backplane of the AH Series provides redundant power supply and communication interfaces for a complete control solution.

Redundant main backplane: AHBP04MR1-5A (4-slot), AHBP06MR1-5A (6-slot), AHBP08MR1-5A (8-slot)

Redundant expansion backplane: AHBP06ER1-5A (6-slot)

Redundant System

Full Redundancy Structure

Redundant CPU	Redundant main backplane	Redundant power	Redundant ext. ports	Ring topology
---------------	--------------------------	-----------------	----------------------	---------------

Modules

Main backplane	Expansion backplane	RTU rack
▪ Ethernet module - AH10EN-5A (V3)	▪ DIO	▪ DIO
▪ Serial module - AH10SCM-5A (V3)	▪ AIO (includes temperature modules) ▪ Serial modules - AH10SCM-5A, AH15SCM-5A	▪ AIO (include temperature modules)

Tasks

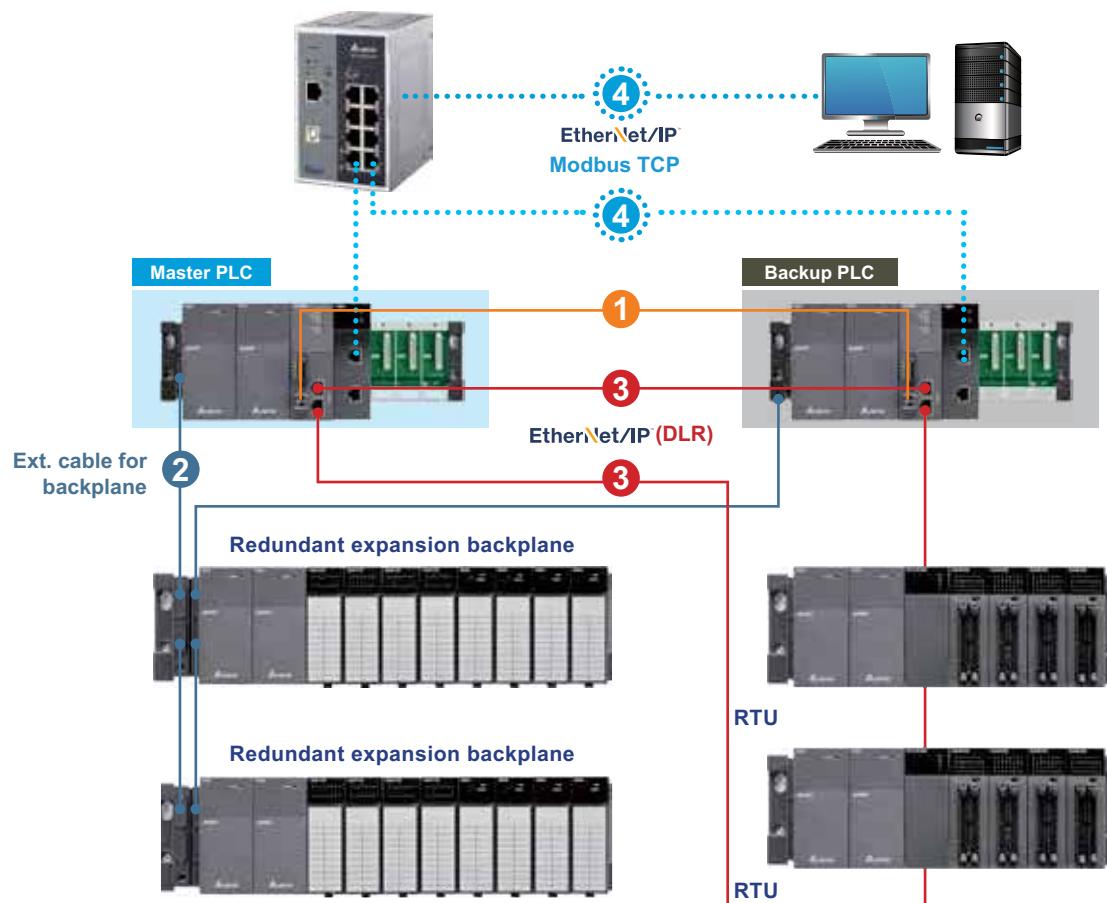

Cyclic	Timer interrupt

CPU built-in sync. module

CPU switch-over time: 20 ms

RTU nodes to support expansion backplanes

Standard backplanes available (under some conditions)

1 Sync. optical fiber

3 EtherNet/IP ring topology (DLR)

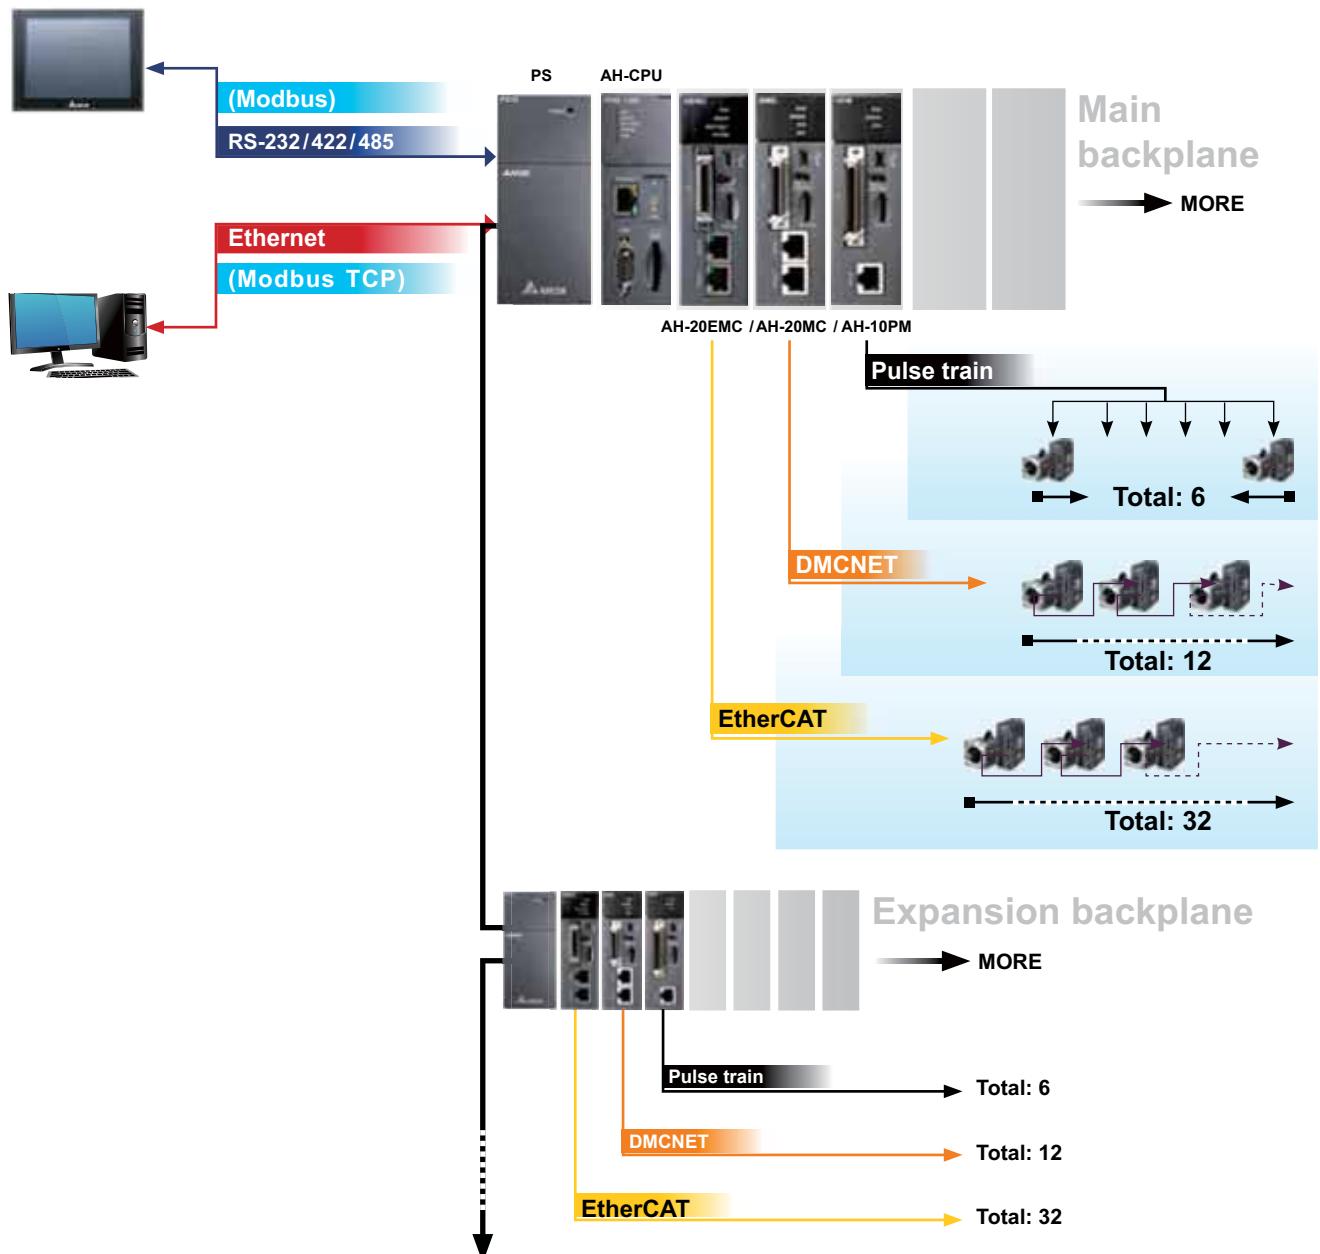

2 Ext. cable for backplane

4 Star topology EtherNet/IP; Modbus TCP

Standard Motion Control System

- ▶ Provides EtherCAT, DMCNET and pulse train solutions for customers.
- ▶ Motion modules can independently take care of both the logic and motion control. Users can write and download the programs to the motion modules.
- ▶ All motion modules support the standard motion control system.
- ▶ All motion modules can be installed on the local backplanes.
- ▶ Motion control functions:
 - » Performance:
 - Pulse train module: Max. 1 MHz output
 - DMCNET module: Min. synchronization time at 12 axes is 1 ms
 - EtherCAT module: Min. synchronization time at 8/16/32 axes is 0.5/1/2 ms
 - » Supports UD/PD/AB/4AB input modes
 - » Supports MPD inputs/E-Cam/G-code/2~6 axes linear interpolation/2 axes arc interpolation/3 axes helical interpolation

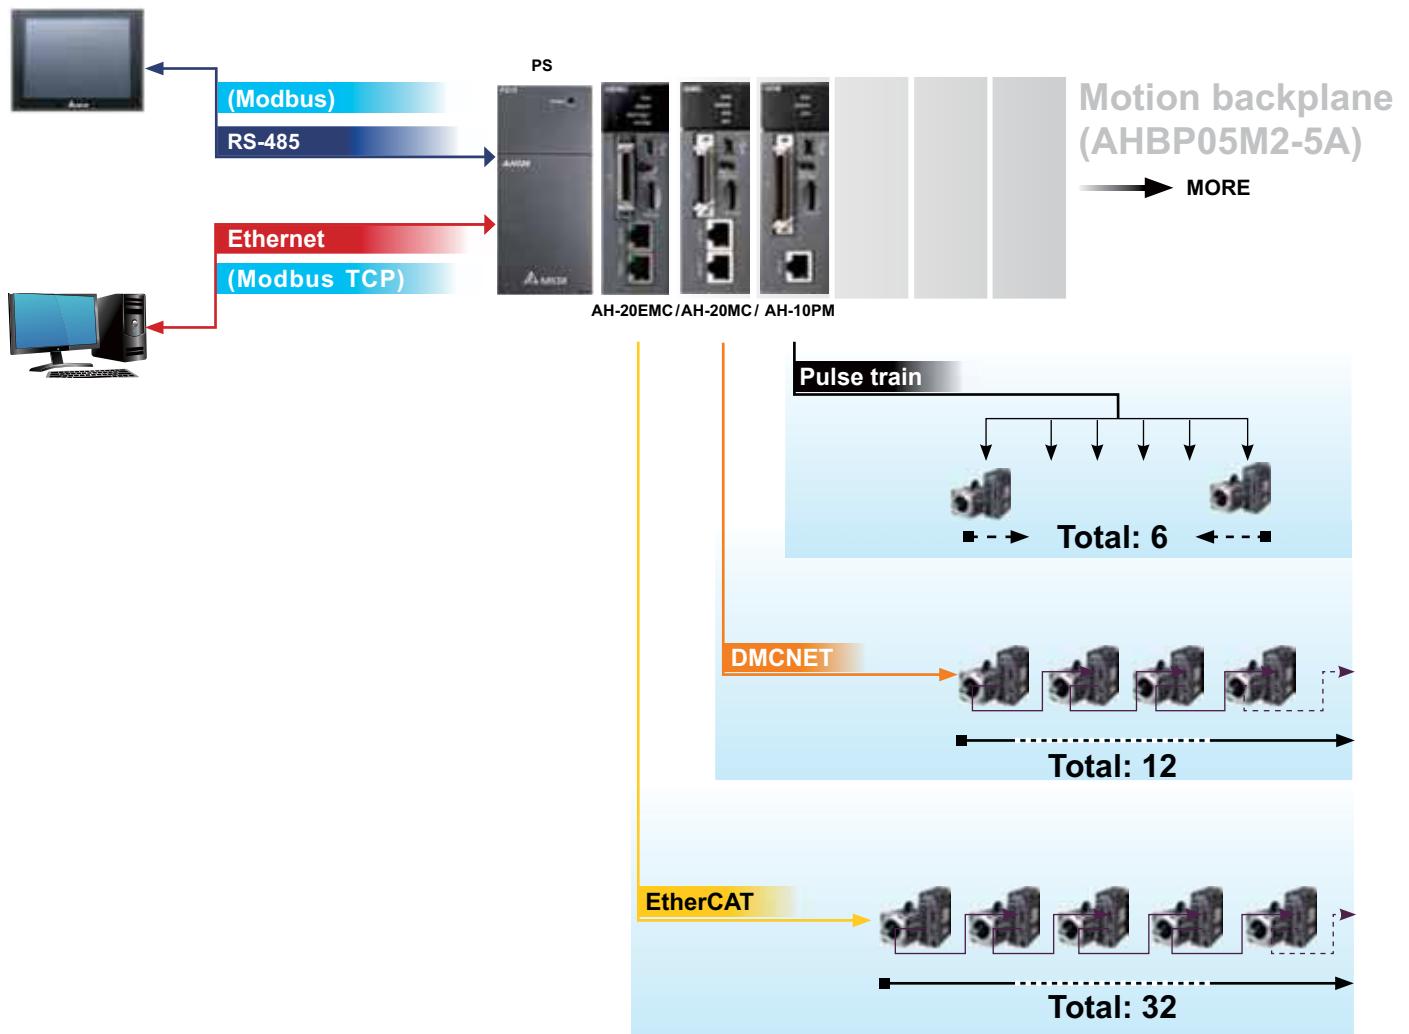

Note: The EtherCAT motion modules (AHxxEMC-5A) do not yet have support installed on the I/O slots.

Compact Motion Control System

- ▶ Provides EtherCAT, DMCNET and pulse train solutions for customers.
- ▶ AHxxEMC-5A motion controller can be installed on the CPU slot of the specific motion backplane and works as a CPU module.
- ▶ Compact motion control system does not support the expansion backplane.
- ▶ Motion modules can be installed on the I/O slot of the motion backplane.
- ▶ Motion control functions:
 - » Performance:
 - Pulse train module: Max. 1 MHz output
 - DMCNET module: Min. synchronization time at 12 axes is 1 ms
 - EtherCAT module: Min. synchronization time at 8/16/32 axes is 0.5/1/2 ms
 - » Supports UD/PD/AB/4AB input modes
 - » Supports MPD inputs/E-Cam/G-code/2~6 axes linear interpolation/2 axes arc interpolation/3 axes helical interpolation

Note: The EtherCAT motion modules (AHxxEMC-5A) do not yet have support installed on the I/O slots.

Applications

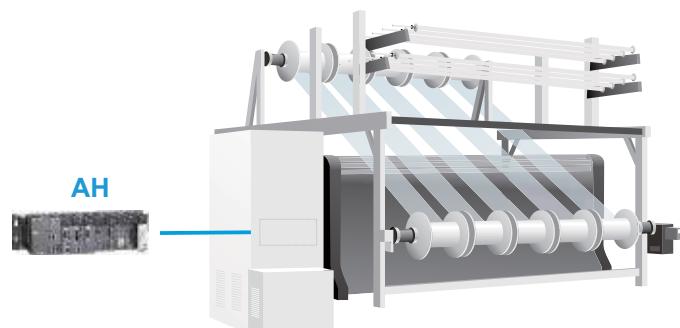

Large Scale Industrial Machines

The features of the AH can easily fulfill the system requirements of large scale industrial machines. By utilizing its unique local extension capability with versatile combinations of I/O modules, the AH can simplify the complex remote I/O system structure in large scale industrial machines with a local I/O system consisting of a single CPU rack and local extension racks, maintaining a high execution speed and lowering the wiring cost.

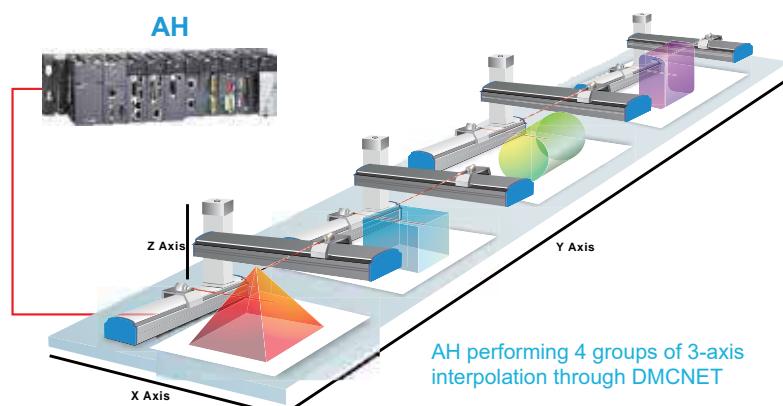

Building Material Processor

Warp Knitting Machine

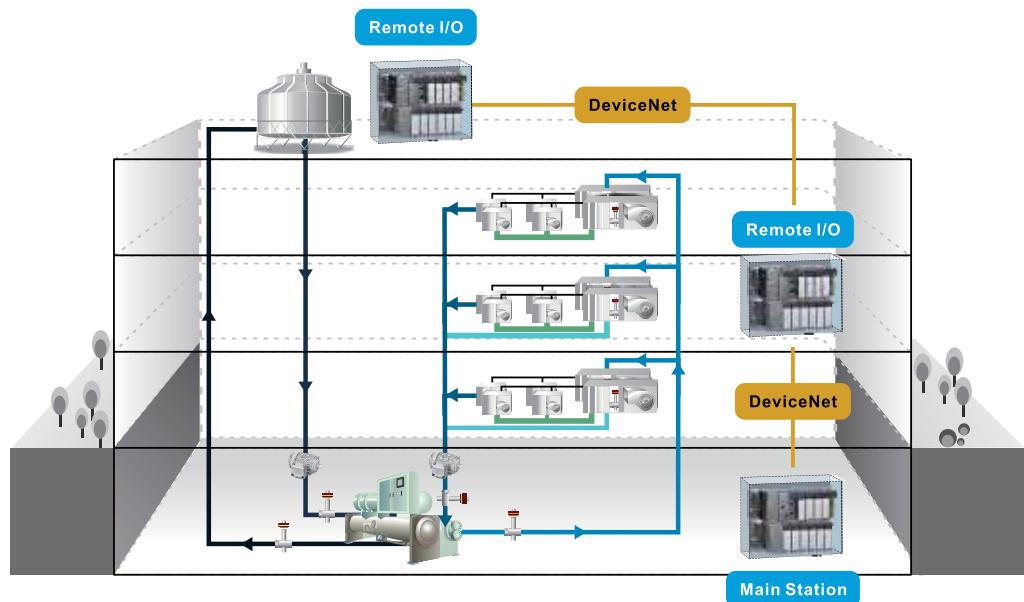

The AH also supports excellent motion control functions including 3-axis linear interpolation, 2-axis arc interpolation, and 3-axis helical interpolation. In addition, the AH is capable of controlling up to 12 axes or 4 groups of 3-axis interpolation synchronously through Delta's high speed motion control network DMCNET.

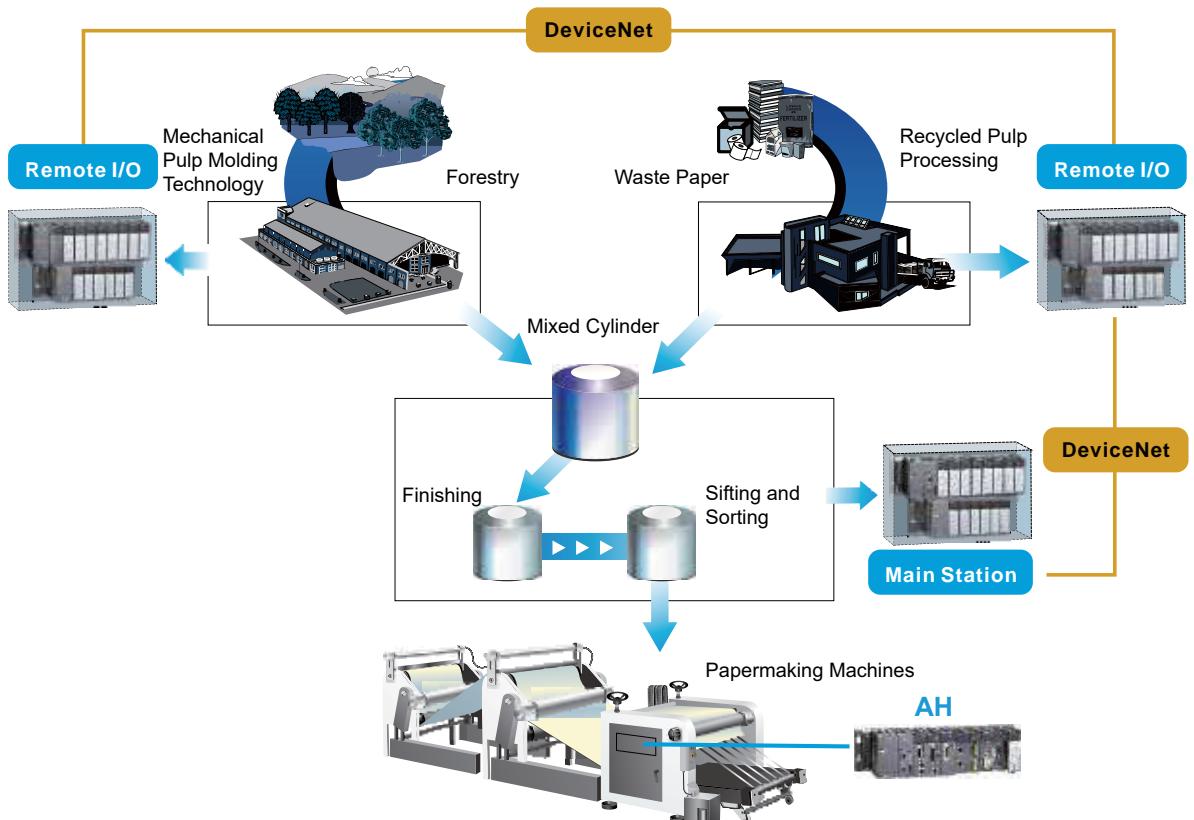

System Applications

The AH is a modular system controller designed for almost all kinds of high-level automation tasks. The abundant selection of I/O modules and the flexible system structure provide the best solutions for all types of system integration requirements. Through the remote I/O expandability, you can build up the AH main station as a central control system and allocate the remote I/O systems on different floors for HVAC applications, or in different processing stations for the paper-making industry. The AH can not only fulfill the application requirements of industrial machines or devices, but it can also provide total solutions for automation systems.

HVAC

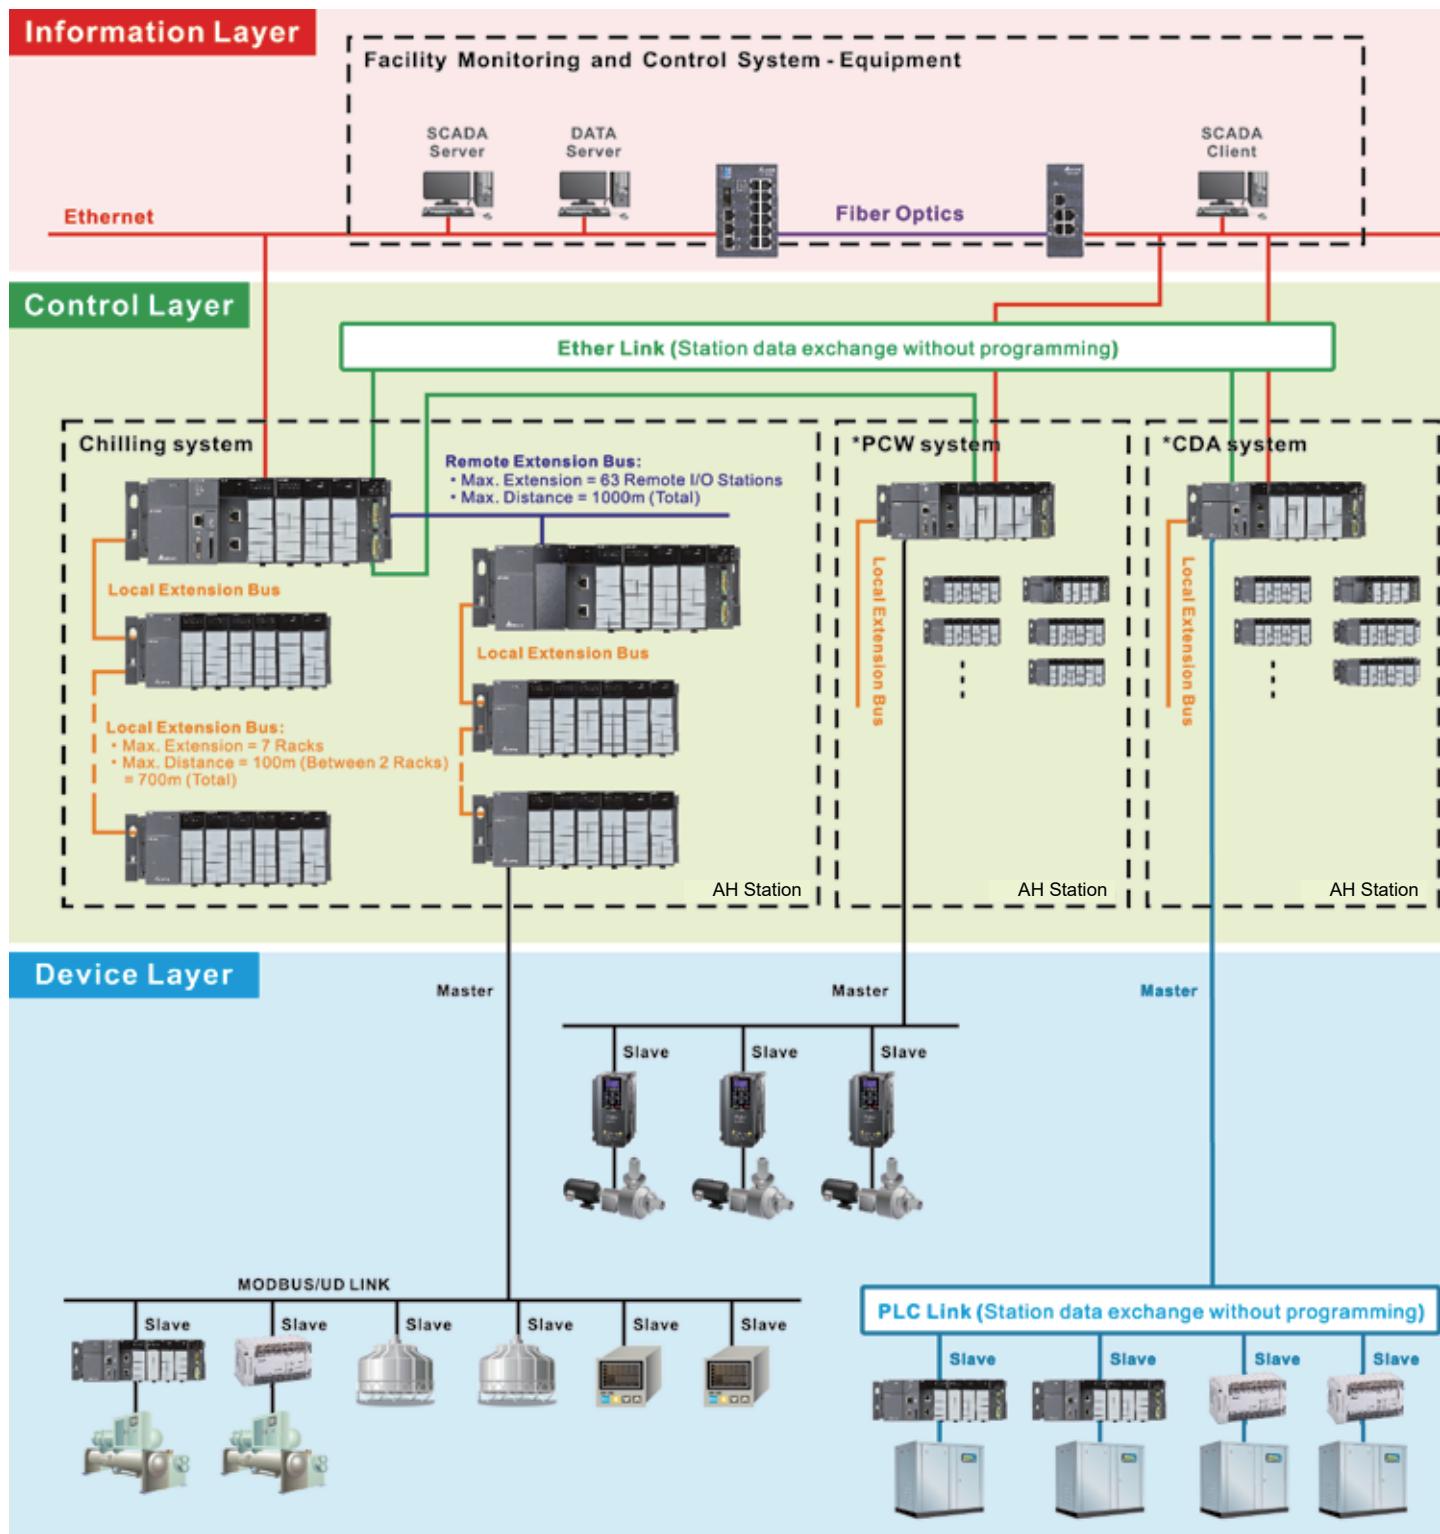

Papermaking Industries

AH System Structure – Facility Monitoring and Control System

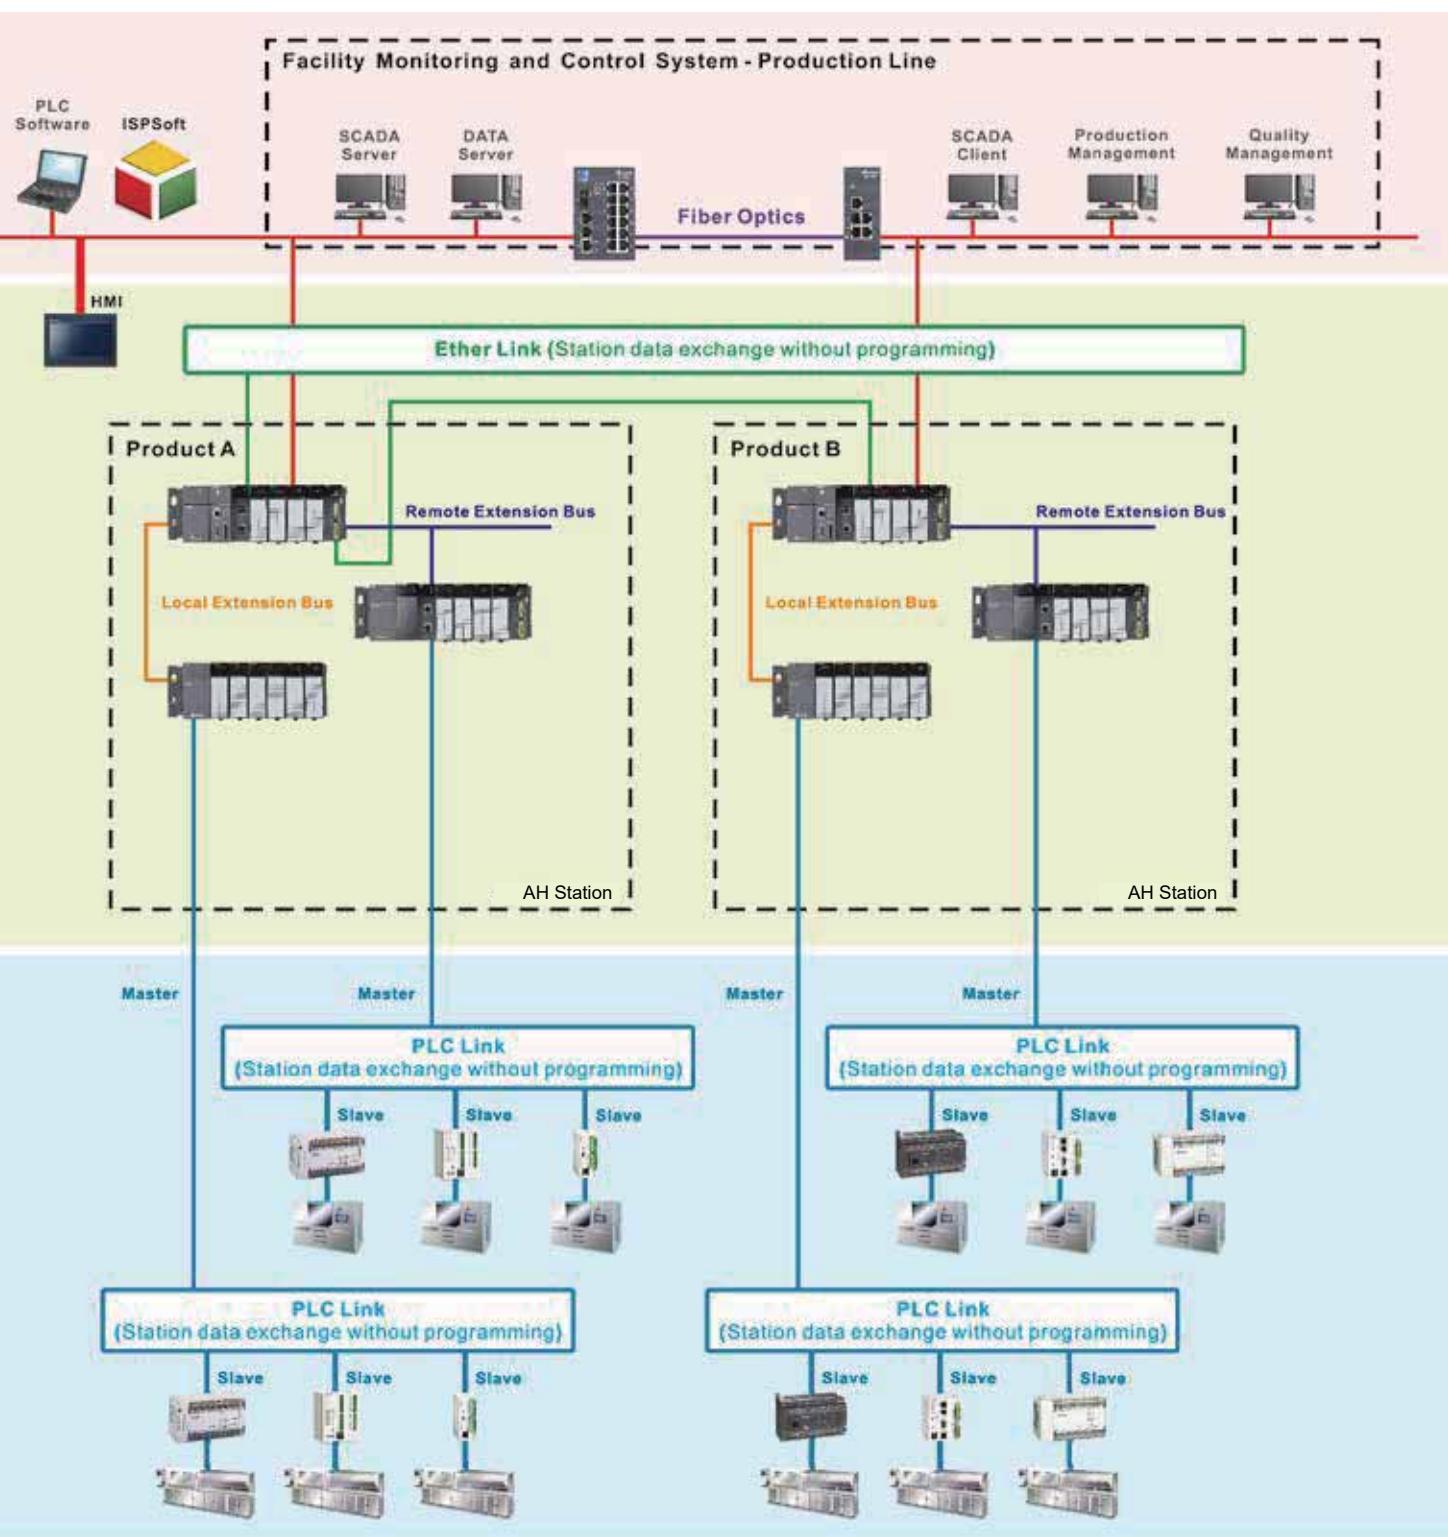

The system configuration of the AH is well demonstrated by the Facility Monitoring and Control System (FMCS).

The AH in the control layer connects multiple facility systems and product processing systems and performs data exchange without programming through Delta's convenient PLC Link and Ether Link. PLC Link can be applied for data exchange between masters and slaves, and Ether Link can be applied for data exchange between AH master stations. The smart communication feature can save you time spent in programming.

* [Note] PCW system: Process Cooling Water System ; CDA system: Clean Dry Air System

In addition to AH PLCs, Delta's industrial automation solution includes human machine interfaces (HMI), DVS series industrial Ethernet switches, DVP series PLCs, AC motor drives, AC servo drives and temperature controllers. You can find the best solution for your industry from our product lines across the device layer, control layer and information layer.

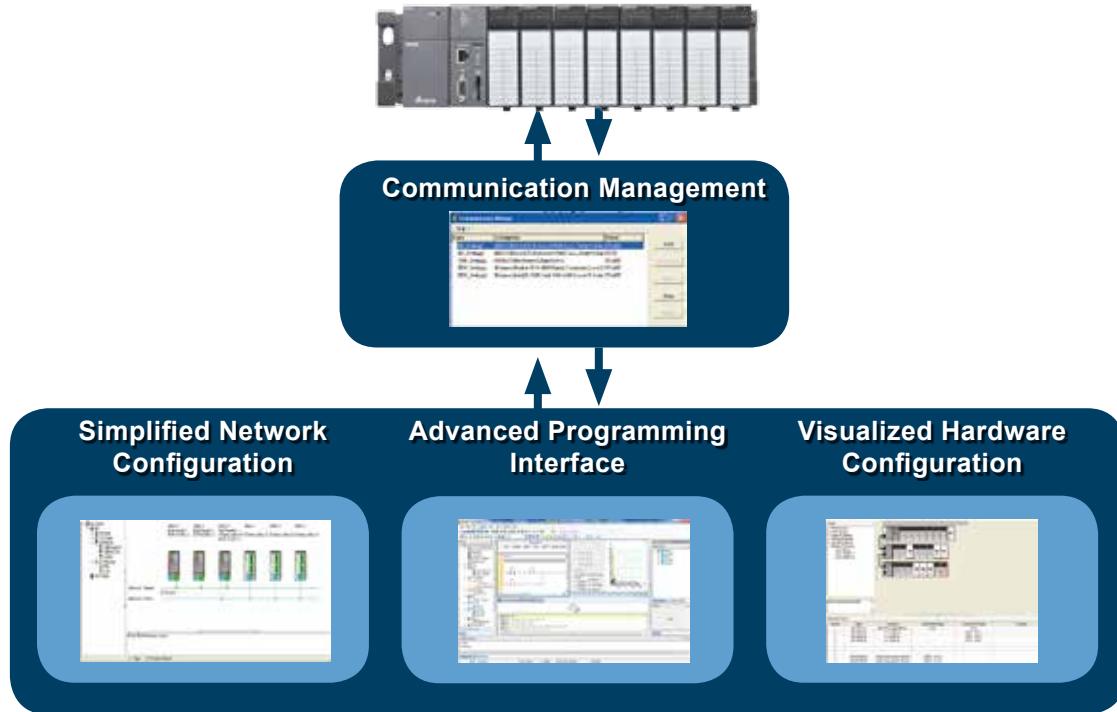

ISPSofT V3.0

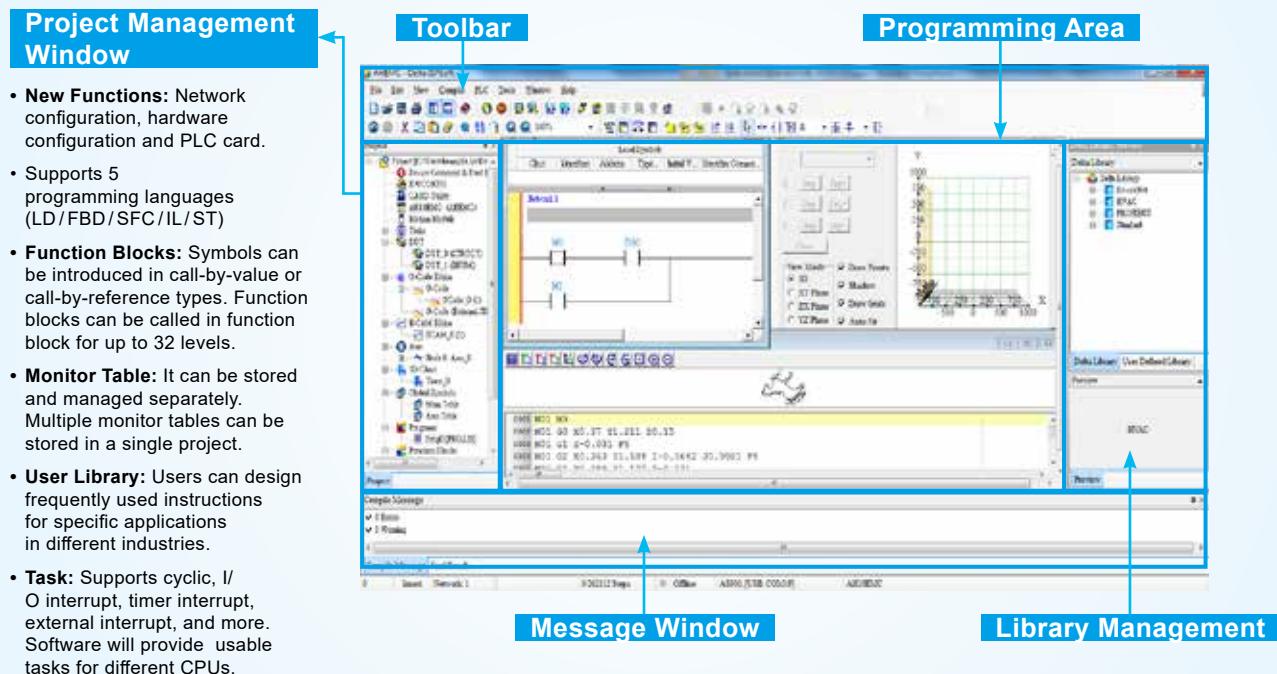

Highly Accessible Programming Software

Fully Integrated Interface

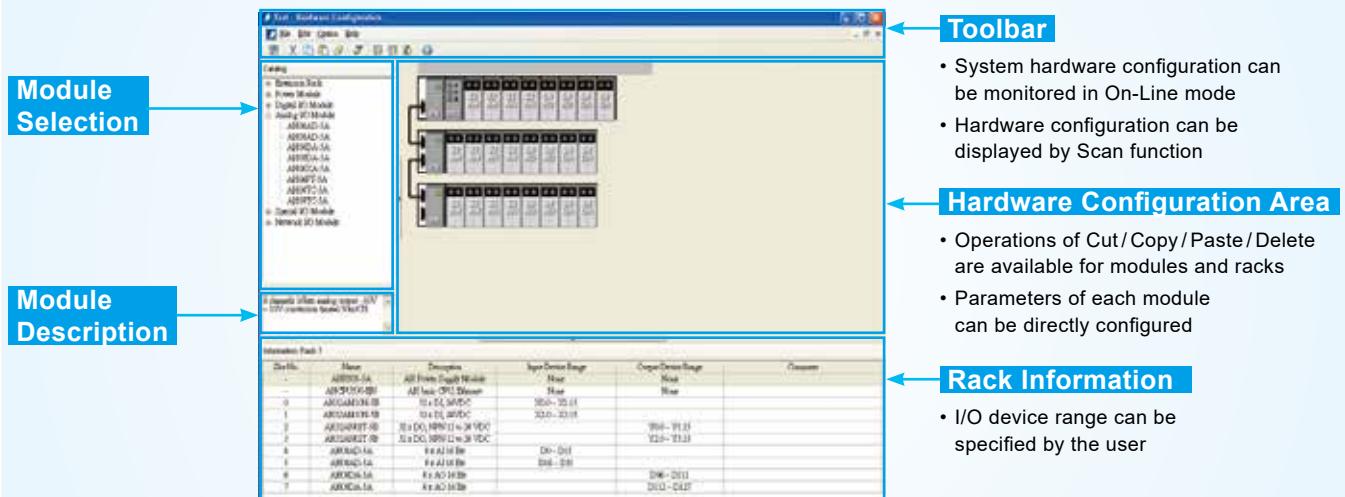

Advanced Programming Interface + Visualized Hardware Configuration + Simplified Network Configuration + Data Tracer & Logger + Motion programming

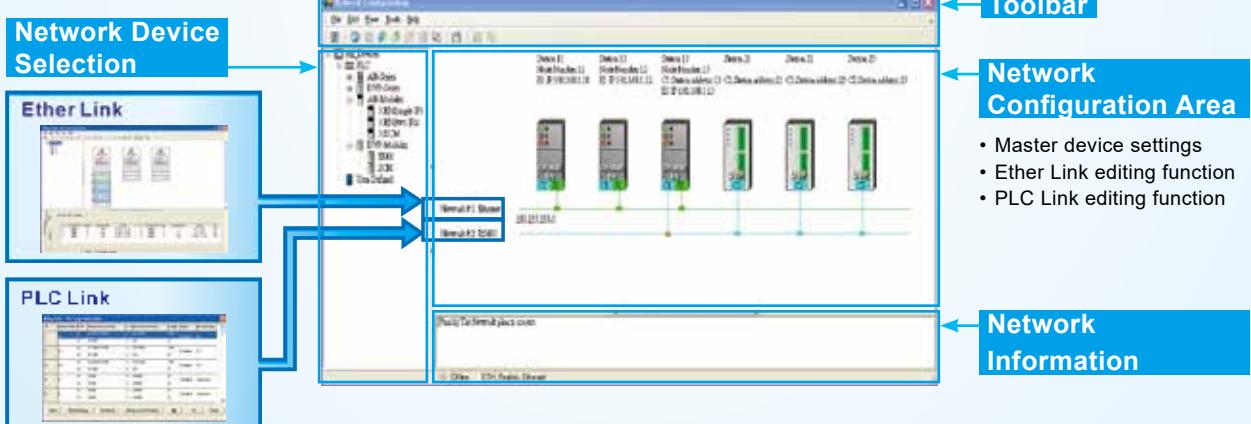

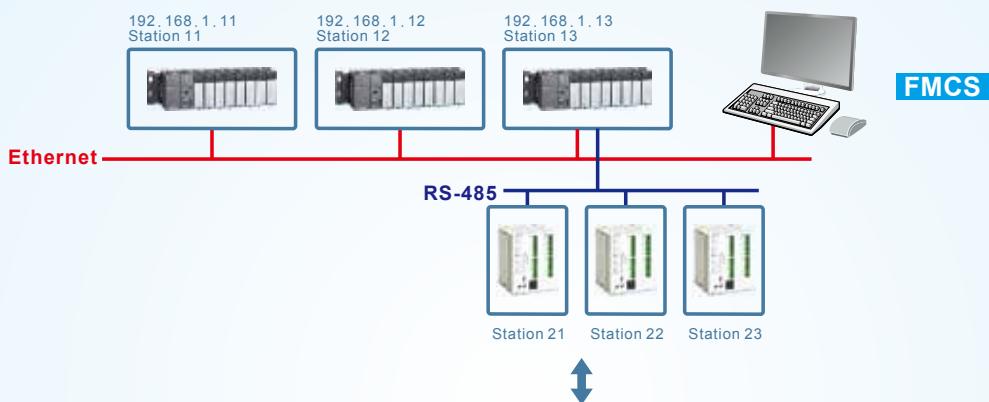

Advanced Programming Interface

Visualized Hardware Configuration

Simplified Network Configuration

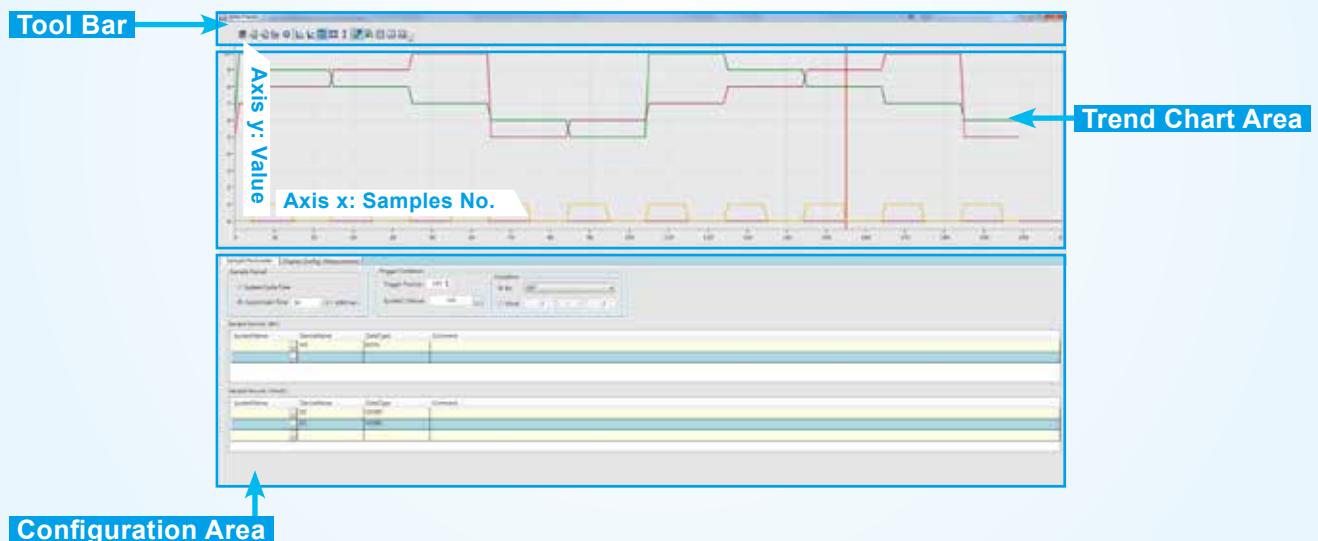

Data Tracer & Logger

Data Tracer

Provides high speed data log ability and the interval could be 1 CPU scan. Users can easily analyze the program logic with this function.

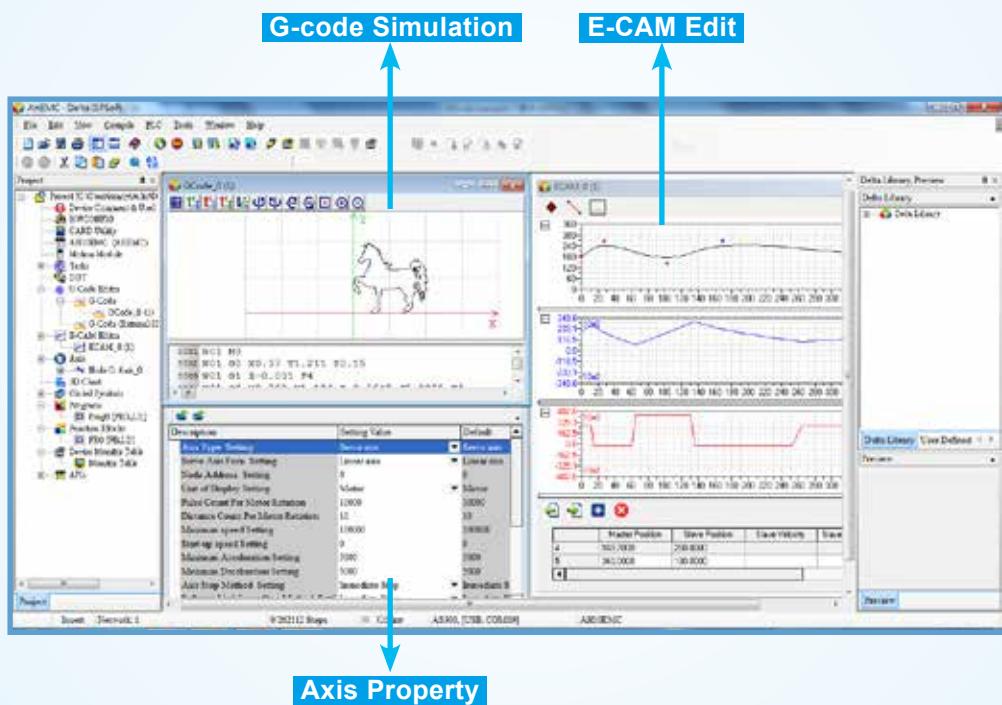

Data Logger

Provides big data log ability and adjustable intervals. Users can log critical system data and then analyze the system operation status.

Integrated Motion Programming

ISPSof V3 integrates the logic and motion program editors into one software

PMSoft V2.0

This programming software is for G-code editing, motion trajectory simulation, positioning route instruction and electronic cam establishment.

The diagram illustrates the features of PMSoft V2.0, each linked to a specific screenshot of the software's user interface:

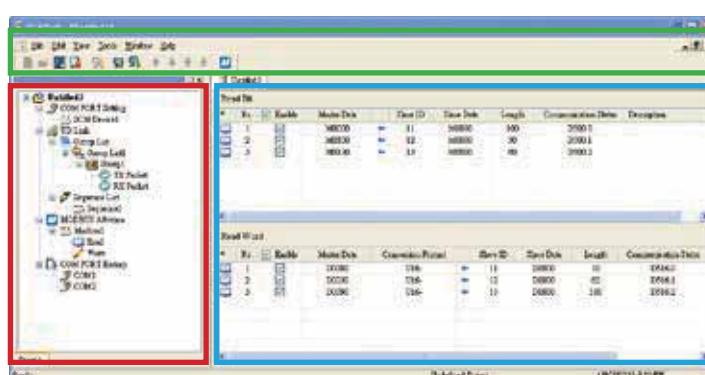

- Variable Declaration**: Separates variable declarations from the program. The corresponding physical I/O point of the variable is defined only after the program is compiled. Users do not need to modify the program. Screenshot: A table titled "Local Symbols" showing variable declarations with their addresses and types.
- Function Block**: A complicated project can be divided into many function blocks. A function block can be used repeatedly. The import/export function makes the programming more convenient. Screenshot: A ladder logic diagram showing multiple function blocks (FBMC_Servo, FBMC_Servo_0, FBMC_Servo_1) connected in parallel.
- Function Block for Motion Control**: Provides function block features specifically for motion control, making programming more convenient. Screenshot: A ladder logic diagram showing a function block for motion control with various inputs and outputs.
- Convenient Monitor Table Management**: Users can save and manage monitor tables independently according to their needs. Screenshot: A table titled "Monitor Table" showing a list of monitor tables with their names and descriptions.
- Electronic Cam**: Electronic cam editing. Screenshot: A screenshot of the "Electronic Cam" editor showing a graphical representation of a cam profile and its parameters.
- CFC Editor**: Supports CFC programming language. Screenshot: A screenshot of the "CFC Editor" showing a graphical representation of a CFC program and its parameters.

SCMSoft V1.0 Communication Editing Software

Provides SCM module with automatic data exchange setup function

Project Management Interface

- Supports user defined protocol (UD Link)
- Supports Modbus protocol
- Supports data monitoring for communication ports

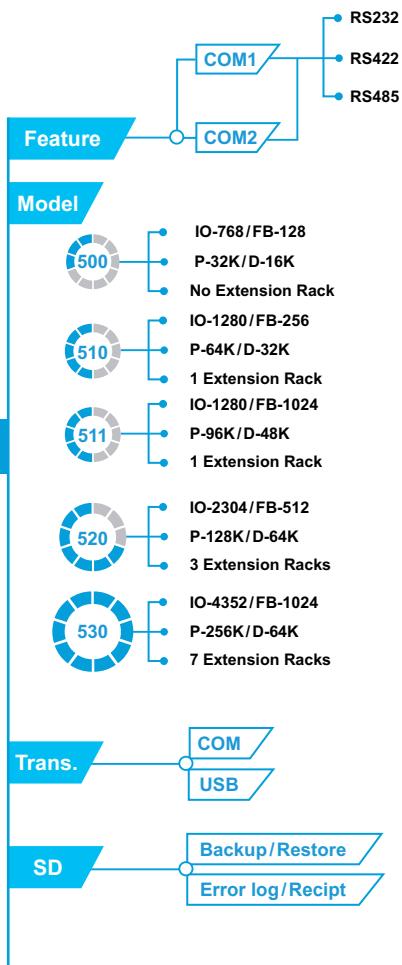

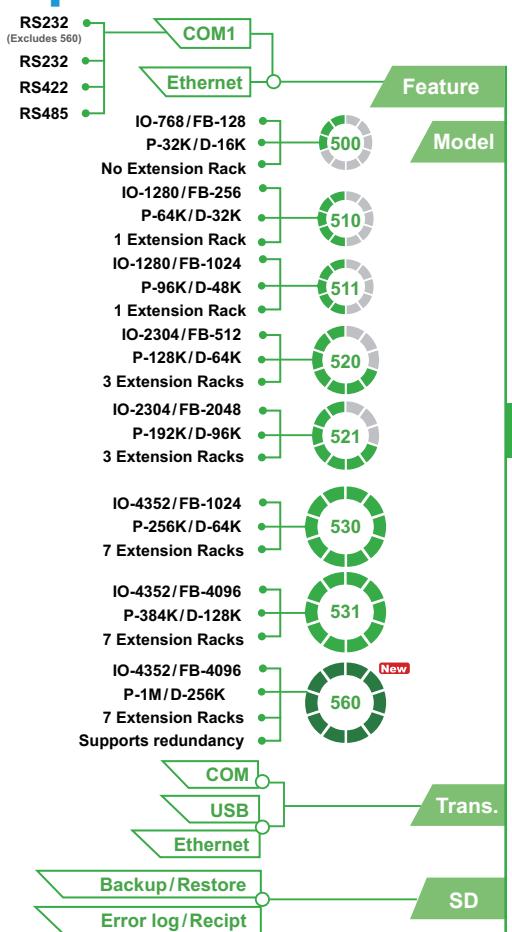

Toolbar

- Upload / Download setup files
- Supports wizards

Editing Area

- Data exchange setup
- Status display
